8. EXPOSURE CONTROLS / PERSONAL PROTECTION

EXPOSURE STANDARDS:

No value assigned for this specific material by the National Occupational Health and Safety Commission (NOHSC).

Exposure Standards for constituents:

Chlorine Peak Limitation = 3 mg/m³ (1 ppm)

SAFETY DATA SHEET

As published by the National Occupational Health and Safety Commission (NOHSC).

Peak Limitation – a ceiling concentration which should not be exceeded over a measurement period which should be as short as possible but not exceeding 15 minutes.

These Exposure Standards are guides to be used in the control of occupational health hazards. All atmospheric contamination should be kept to as low a level as is workable. These exposure standards should not be used as fine dividing lines between safe and dangerous concentrations of chemicals. They are not a measure of relative toxicity.

BIOLOGICAL LIMIT VALUES

None allocated.

ENGINEERING CONTROLS:

Ensure ventilation is adequate to maintain air concentrations below Exposure Standards. Avoid generating and inhaling mists. If inhalation risk exists use with local exhaust ventilation or while wearing suitable mist respirator. Keep containers closed when not in use.

PERSONAL PROTECTIVE EQUIPMENT (PPE):

The selection of PPE is dependent on a detailed risk assessment. The risk assessment should consider the work situation, the physical form of the chemical, the handling methods, and environmental factors.

MANUFACTURE, PACKAGING AND TRANSPORT: Avoid all contact. Wear overalls, chemical goggles and impervious gloves (Nitrile, Neoprene or PVC). Use with adequate ventilation. If risk of inhalation exists, wear mist respirator meeting the requirements of AS/NZS 1715 and AS/NZS 1716. Always wash hands before smoking, eating, drinking or using the toilet. Wash contaminated clothing and other protective equipment before storage or re-use.
